

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph on page 7, lines 8-15 of the specification with the following amended paragraph:

As also described briefly above, according to one embodiment, a switch 8B may be interposed between the integrated power input connector 6 and the power supply 12, thereby preventing the flow of current between the input connector 6 and the power supply 12 when in an open position. The ~~switch 8A~~ switch 8B may be mounted on and accessible from an external portion of the housing 2. By using the ~~switch 8A~~ switch 8B, a user may easily remove supply power from the power supply 12, thereby eliminating the output voltage of the power supply 12. In this manner, the powered device may be conveniently turned on and off.
